

Task Introduction

Brand Collection Page + Google AMP Player Integration

Objective

The objective of this task is to recreate a **Brand Collection page** that closely matches the functionality and user experience of the reference link below. The page should display brand collections fetched from an API and play collection stories using the **Google AMP Stories Player** for optimal performance, SEO, and mobile experience.

Reference URL:

<https://staging-brand.oono.ai/nov-25>

- use Google AMP player
 - Open stories in the player
 - X to close the collection
 - Unique link for each story opened
 - Keyboard keys need to work (next, previous, escape to close)
 - everything needs to be lightning fast
 - use oono APIs to display stories
-

Scope of Work

1. Brand Collection Page (UI + Logic)

Develop a **clean, fast, and mobile-first brand page** that displays collections retrieved from an API.

Key Requirements

- Fetch collections data via API (sample response provided below)
- Display collections in a **grid or list layout**
- Each collection represents a group of stories/videos
- Clicking on a collection should open the AMP Stories Player

Design Guidelines

-  No banner required

-  No brand profile image
-  Show **only collections listing**
-  Simple, clean, and minimal UI
-  Fast-loading and mobile-first when I click any collection See. this page that now a collection player within **amp player**.

2. Google AMP Stories Player Integration

Implement **Google AMP Stories Player** to play stories within a collection.

Functional Flow

- User clicks on a collection
- AMP Stories Player opens on the same page or dedicated player page
- Player loads and plays stories dynamically based on selected collection

Benefits of AMP

- Faster load time
- Better mobile performance
- SEO-friendly rendering

3. Data Handling

- Load collection and story data from server-side code
- Pass story URLs dynamically into the AMP Stories Player
- Ensure smooth playback and correct story sequencing

Key Considerations

- Follow Google AMP Stories Player best practices
- Ensure compatibility with modern browsers and mobile devices
- Use AMP-compliant markup and scripts
- You are encouraged to research AMP Stories implementation using Google documentation
- LLM tools may be used to assist in building demo or boilerplate code
